## PROJECT

### Automation of Central Library (PHP, JavaScript, Tailwind CSS)

- Two user panels: Librarian and Library Member.
- Librarians can manage all book records and track book issue/return history.
- Late return blocks future borrowing unless fine is paid (manual/Bkash).
- Members can search books by name, author, serial, or shelf location.
- Includes email notification system, enhanced security, and CAPTCHA validation.

### Courier Service System (Java)

- Created a dynamic animated homepage.
- Service providers can manage resources and add new projects.
- Automatic email notifications for customers when a parcel is shipped and received.
- Tracks item list and generates product voucher copies.
